

## DMW003 DMeta Decentralised Metaverse 1 Minute Intro

### DMeta Decentralised Metaverse

DMeta Decentralised Metaverse is a free and open source software (FOSS) project that aims to build a **truly free and decentralised metaverse**, where users (YOU!!) will:

- have genuine ownership of its infrastructure (hardware devices) and
- be a shareholder who is able to negotiate directly with advertisers and
- earn YOUR rightful revenues, and
- to keep your personal data completely private, and
- remain anonymous in all transactions, unless you choose to disclose yourself.

DMeta is made possible due to fundamental breakthroughs in the applications of public key cryptography:

- DMeta Contract uses hashes of contract text and public keys of signing parties to establish a novel class of smart contracts without blockchain that is completely free and decentralised.

- How to use DMeta Contract (DMC)
  - <https://www.youtube.com/watch?v=jOByr4L2zDM>
- DMetaMVC is a self contained Model-View-Controller framework that is less than 500 kilobytes in size, making it possible to be deployed on individual user's mobile phones, notebooks or desktop computers, thus making Users (YOU) the true owners of DMeta cloud computing infrastructure.

## DMeta: Immediate and Practical Benefits

The Centralised Metaverse, represented by MAGA (Microsoft Amazon Google Apple etc., a pun on "Make America Great Again"), characterised by their centralised user authentication method based on usernames, have a combined revenues exceeding one trillion US Dollars a year, by exploiting user's (YOUR VERY OWN) private data. So if we have indeed found a breakthrough in making the metaverse decentralised, is getting a fair share for the USERS (YOU), say 0.1% of MAGA revenues, by 2025, not a modest goal?

More specifically, MAGA build Social Networks by exploiting the connections of YOU and YOUR FRIENDS, hence YOUR network of friends is where MAGA derive its values!!

You and your friends have been studied in various disciplines using the term, unsurprisingly, "friends of a friend", along with its acronym, FOAF, as expected! We wish to highlight this term, so that we may describe the problems and benefits concerned as they are, while other related terms, such as affiliate marketing or multi-level marketing, have garnered mixed reputations over the years. One of the main reasons affiliate marketing and multi-level marketing have negative reputation is due to the fact that their new members are expected to pay a fee upfront, thus enriching the early adopters unfairly. However, in DMeta network, the contract that you make with a friend that you recommend, using DMeta Contract, is completely your own decision, and DMeta network does not charge any fee from you for creating the contract. As such, DMeta network has the compound effect of FOAF like other affiliate marketing or social media in terms of spreading good news and brands, but none of the negative effects such as upfront fees or users (YOU) not getting a dime from the advertising revenues as with existing social media platforms.
